Suliman Alothman

Software Quality Assurance | Business Administration
Riyadh, Saudi Arabia

Summary

Senior Software Quality Engineer with over 8 years of experience developing and validating top-tier systems and products, scaling from B2C to B2B environments. Backed by a Business Administration qualification, I am leading a homeowners association, representing 78 owners, and have supervised and mentored junior engineers, embedding industry best practices across quality teams. I have leveraged Artificial Intelligence (AI), by using AI Agents and Models, to advance test automation and performance testing activities. I am developing and enhancing a proprietary testing framework built on leading technologies, in addition to multiple self-owned systems, also with help of AI. As the senior release authority, I held the final decision on approving or rejecting every build, ensuring zero adverse impact on functionality or customer experience. My automation and performance testing initiatives drove consistently high-performing, reliable systems , earning the sustained trust and recognition of top management.

Experience

زنوردلاو ةجمرملاو ينارابيسلا نمألل يدوعسلا دادحتلا | SAFCSP
Advanced Software Quality Engineer
December 2024 - Present (1 year 11 months)
Riyadh, Saudi Arabia

Responsibilities:
- Design and write test cases for user stories
- Develop automation scripts for the systems being tested
- Review other testers' test cases and provide feedback for modifications and improvements
- Review UI designs and suggest enhancements if needed
- Review BRDs and apply static testing on them, and suggest clarifications if some BRs are ambiguous or conflicting with other BRs
